

Sachin kumar

Class 1 for Bca part 1

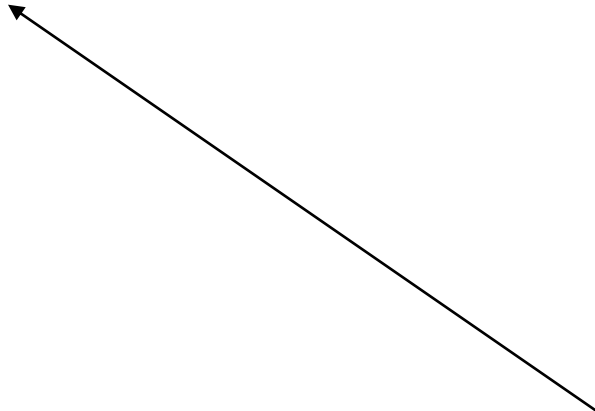

Evolution of computer

- ⇒ Blaise pascal invented the first mechanical adding machine in 1642 (it works only for addition)
- ⇒ In 1671 the machine is invented name as calculator which can perform multiplication by “Barron Gottfried Wilhelm von Leibniz”
- ⇒ Keyboard machine was originated in the united states around 1880(which is used even today)
- ⇒ In 1822 “Charles Babbage” was invented a difference engine that could produce reliable table
- ⇒ Charles Babbage is a Professor at Cambridge University in nineteenth century
- ⇒ Charles Babbage is also known as father of digital programmable computers
- ⇒ Charles Babbage is also employed in group of clerk where he preparing mathematical and statistical table

- ⇒ Charles Babbage again invented a machine with new idea in 1842 the name was “Analytical engine” that was capable to performing basic arithmetic function for the any mathematical problem where that average speed is 60 additions per minute
- ⇒ In 1940s, Dr. John Von Neumann introduced the “stored program” concept that helps to stored the data

Now work for you:→

Name	D.o.B	Age
mohan	12/15/1991	28years,4Months,5days
sohan	10/10/1990	
rohan	2/10/1995	
ajay	2/5/1980	
vijay	12/12/1995	
sanjay	10/5/1986	

Question is that find the all people age such as:→
